

TAYLOR GEISLER, Ph.D.

(801) 888-0957 | tsgeisler@gmail.com | [linkedin.com/in/taylorgeisler](https://www.linkedin.com/in/taylorgeisler) | Salt Lake County, UT (Remote Available)

Education

Stanford University, Ph.D., Chemical Engineering (**Numerical Modeling Focus**). 2014–2019

University of Utah, B.S., Chemical Engineering. 2011–2014

Work Experience

Senior Data Scientist, BROADCOM. *Draper, UT. Sep 2021 – Jan 2026*

- Primary owner of the production ML system powering **Symantec SiteReview** (sitereview.bluecoat.com), a core Broadcom security product used by enterprise and government clients worldwide. Designed, deployed, and maintained the classifiers powering this service and automating website categorization and threat-block requests, **increasing automation from 20% to 80%** and **eliminating 1,000+ manual reviews per day**.
- Built and productionized a **domain reputation classifier** that evaluates every newly registered domain daily, leveraging registrant reputation and hundreds of behavioral and network features to **block malicious domains before they go live**.
- Solved a decade-old data integrity challenge by **designing from scratch, testing, and deploying an ensemble ML system** to safely identify and remove outdated entries from the master rating database, processing **millions of websites weekly**, and satisfying multiple invested stakeholders with competing requirements.
- Integrated **AI coding assistants** (Cursor, Gemini Code Assistant) into software development workflow. Created POC to explore replacing core system and **built a state-of-the-art RAG LLM classifier using Gemini and a Knowledge Base system**.

Artificial Intelligence Engineer, PassiveLogic (Series C Building Automation Startup)

Holladay, UT. Jul 2020 – Aug 2021

- Lead developer building the “Equipment Simulator” software engine which generates a **building-specific AI forecasting model** for each customer **using time-series thermostat measurements as training data and input features**.
- **Implemented data pipeline to automate the collection, labeling, storage, and feature extraction** of thermostat and sensor data to a centralized ground-truth data repository. Enabled easy access to training data for all future AI workloads.
- **Achieved 5,000× computational speedup** in AI models through profiling and refactoring Swift for TensorFlow functionality, enabling faster model inference in production and optimal results.

Data Scientist, Altman.ai (Private Equity Intelligence Platform, Acquired by PEI Group)

Bend, OR. Jan 2020 – Jul 2020 (Contractor)

- Trained **custom NLP models to extract specific** private equity fund data from press releases with **improved precision of 0.95**, up from 0.5 baseline rule-based system. Developed **spaCy-based pipelines, API** to identify fund names, raise amounts (\$’s raised), and investment strategies, **transforming unstructured text into a structured queryable database**.
- Delivered a **BERT text categorization model** for financial news docs that **improved identification of relevant articles by 6×** over naïve bayes method.

Data Science Fellow, Insight Data Science. *Seattle, WA. Jan 2020 – Feb 2020*

- Developed a natural language software tool that extracts and collects private equity fund performance metrics and trends at scale from the financial news and sentiment analysis.

Doctoral Researcher, Stanford University. *Stanford, CA. Sep 2014 – Sep 2019*

- Designed and executed large-scale **numerical experiments** and **predictive models** to simulate turbulent airflow systems, applying statistical learning, uncertainty quantification, and experimental design principles to validate results ensure robustness and reproducibility of model predictions.
- Managed **cloud workloads** requiring tens of thousands of CPU hours each, developing automated pipelines, scalable data transformation workflows, and performance-optimized algorithms in **Python and C++**.
- Partnered with cross-functional teams to translate high-performance simulation outputs into **actionable insights**, leveraging **data visualization, workflow automation, and model validation** frameworks.
- Developed **automated data and compute pipelines** for end-to-end simulation analysis, combining scalable infrastructure with reproducible workflows to accelerate experimentation and insight generation.
- Authored **3 peer-reviewed publications**: 1, 2, 3, and delivered **3 national conference presentations**.

Skills

Machine Learning: Text Classification, ML Model Maintenance, Feature Engineering, Data Pipelines, Deep Learning

Programming Languages: Python and ML Libraries (Expert), C++ (Expert), Java (Advanced), MySQL, Git, GitHub

Cloud & DevOps: Google Cloud Platform (GCP), Kubernetes, Kubeflow Pipelines, Jenkins, Splunk, Trino, API Design, Docker

AI Tools & Frameworks: RAGs, LLMs, Vertex AI, Gemini Code Assistant, Cursor, BERT
